Dimensions Exploration

Identifying the unique values (or categories) in each dimension.

Recognizing how data might be grouped or segmented,
which is useful for later analysis.

Is Data Type = Number?

YES

NO

Does it make sense
to aggregate?

Dimension

YES

NO

MEASURE

Measures Exploration

Calculate the key metric of the business (Big Numbers)

- Highest Level of Aggregation | Lowest Level of Details -

999

## Measures Exploration

$\Sigma$  [Measure]

SUM (Sales)

AVG (Price)

SUM (Quantity)

10

20

50

30

10

80

30

10

$\Rightarrow$

240

BIG Number

Key Metric

Magnitude

Compare the measure values by categories.

It helps us understand the importance of different categories.

# Magnitude

$\Sigma$  [Measure] By [Dimension]

Total Sales By Country

Total Quantity By Category

Average Price By Product

Total Orders By Customer

600

|   |     |
|---|-----|
| A | 200 |
| B | 300 |
| C | 100 |

Ranking

Order the values of dimensions by measure.

Top N performers | Bottom N Performers

# Ranking

Rank [Dimension] By  $\Sigma$  [Measure]

Rank Countries By Total Sales

Top 5 Products By Quantity

Bottom 3 Customers By Total Orders

Top RANK() DENSE\_RANK()

ROW\_NUMBER()

|   |   |     |
|---|---|-----|
| ① | B | 300 |
| ② | A | 200 |

Change - Over - Time Trends~

Analyze how a measure evolves over time.

Helps track trends and identify seasonality in your data.

## Change-Over-Time ~Trends~

$\Sigma$  [Measure] By [Date Dimension]

Total Sales By Year

Average Cost By Month

|      |     |
|------|-----|
| 2024 | 300 |
| 2025 | 100 |
| 2026 | 200 |

## Cumulative Analysis

Aggregate the data progressively over time.

Helps to understand whether our business is growing or declining.

# Cumulative Analysis

$\Sigma$  [Cumulative Measure] By [Date Dimension]

Running Total Sales By Year

Moving Average of Sales By Month

Cumulative

|      |                  |     |
|------|------------------|-----|
| 2024 | 300              | 300 |
| 2025 | 100 <sup>+</sup> | 400 |
| 2026 | 200 <sup>+</sup> | 600 |

Diagram illustrating cumulative analysis. A table shows data for years 2024, 2025, and 2026. The first column shows individual values (300, 100, 200) with red plus signs above the 100 and 200. The second column shows cumulative values (300, 400, 600). Red arrows indicate the cumulative calculation: 300 for 2024, 300 + 100 for 2025, and 300 + 100 + 200 for 2026. A blue arrow points to the word 'Cumulative'.

## WINDOW FUNCTIONS

## Performance Analysis

Comparing the current value to a target value.

Helps measure success and compare performance.

# Performance Analysis

Current [Measure] - Target [Measure]

Current Sales - Average Sales

Current Year Sales - Previous Year Sales

Current Sales - lowest Sales

|   | Current<br>↓ | -<br>⊖ | Target<br>↓ (AVG) | Performance<br>↓ |
|---|--------------|--------|-------------------|------------------|
| A | 200          | -      | 200               | 0                |
| B | 300          | -      | 200               | 100              |
| C | 100          | -      | 200               | -100             |

## WINDOW FUNCTIONS

Part-to-Whole

Proportional  
Analysis

Analyze how an individual part is performing compared to the overall, allowing us to understand which category has the greatest impact on the business.

## Part-to-Whole

Proportional  
Analysis

$([\text{Measure}] / \text{Total} [\text{Measure}]) * 100$  By  $[\text{Dimension}]$

$(\text{Sales} / \text{Total Sales}) * 100$  By Category

$(\text{Quantity} / \text{Total Quantity}) * 100$  By Country

|   |     |     |
|---|-----|-----|
| A | 200 | 33% |
| B | 300 | 50% |
| C | 100 | 17% |

## Data Segmentation

Group the data based on a specific range.

Helps understand the correlation between two measures.

# Data Segmentation

[Measure] By [Measure]

Total Products By Sales Range

Total Customers By Age

Σ

Categorize

|    |     |   |        |
|----|-----|---|--------|
| 3  | 50  |   |        |
| 4  | 100 | → | Low    |
| 5  | 150 | → | Medium |
| 1  | 200 | → | Large  |
| 10 | 250 | → |        |
